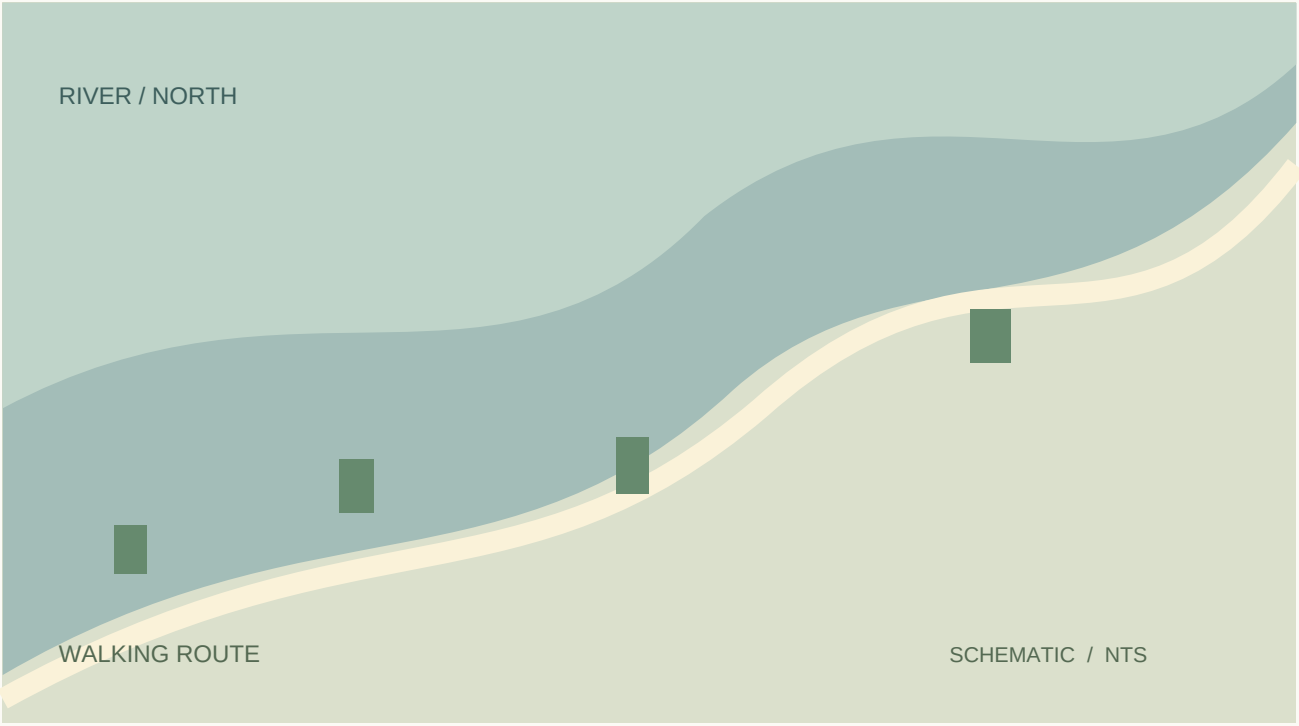
Along the water

A walking study of the southern riverbank

SITE JOURNAL / OCTOBER 2026 / WALK 03



01 The river edge connects short moments of shade, rest and movement.

Reading the edge

The path follows the river through a sequence of open views and planted pockets. This walk records how people pause at the water, where the route narrows, and which small changes could make the journey more welcoming. Observations are provisional and will be checked on the next site visit.

FOCUS

Continuity of access, shade at rest points, and seasonal drainage.

Pauses & passages

Three observations from the walking route

01 South entrance

A small change in level interrupts the approach to the water.
Check whether a continuous walking surface can join the existing path.

02 Shade and seating

Seats near the planted edge are used more often in the afternoon.
Map the canopy cover and revisit the site at a different time of day.

03 After the rain

Water collects beside the low section of the path.
Record drainage conditions after the next rainfall before proposing work.

Return to the site

A short checklist for the next walking study

- [ ] Follow the complete route

  Walk from the southern entrance to the northern crossing.

- [ ] Compare the quiet moments

  Observe seating at midday and again in the late afternoon.

- [ ] Document the wet edge

  Photograph the drainage line after a period of rain.

- [ ] Share the observations

  Bring these notes into the next landscape review.
